## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-8 and 10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

3. Claims 1-8 and 10 recite the limitation “a basal plane of which is a non polar face and said basal plane has a partial surface having polarity (hereinafter referred to as a partial polar surface), characterized in that said partial polar surface is a polar portion with surface energy higher than the said basal plane”. This limitation makes the claims indefinite because it is unclear how the partial polar surface (a.k.a. the partial surface of the basal plane having polarity) can have a surface energy higher than the basal plane if the basal plane includes the “partial polar surface”.

In other words, how can the part be more than the whole?

### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 1775

5. Claims 1, 2, 4, 7 and 10 are rejected under 35 U.S.C. 102(e) as being anticipated by US 6,416,578 (Nakano et al.).

Nakano teaches a hexagonal silicon carbide (group IV-IV) single crystal substrate having substrate with a (1, 1, -2, 0) surface (basal plane) and an undulation with a 0001 orientation (partial polar surface face) (Col. 3, lines 1-7). Nakano further teaches that a single crystal silicon carbide film comprising a step of a plurality of undulations is epitaxially grown the single crystal substrate (has a spatial lattice that is homogenous with the substrate).
